

New Technology **in Drying**

The Adaptidry Products achieve high efficiency by dispersing intense drying power simultaneously to multiple areas around the room.

They create more pressure – positive or negative suction within walls and in some cases without drilling holes, making it more effective than other vent systems. They also work great for drying out sleepered floors (spot courts and gymnasiums) cabinets, walls & hardwood floors.

When used with a HEPA air scrubber, it becomes a true HEPA filtration system for filtering contaminants during remediation jobs.
